GECPS

- **What is [GECPS](#)?**

GECPS is a standardized and secure method to report GA Reportable Violation Codes to DDS according to HB1253.

- **[GECPS Online Account](#)**

The online account allows GECPS users to update contact information, review outstanding errors and access documents uploaded by DDS.

ERROR HIGHLIGHTS

2002: Driver not Found (Georgia Driver was assumed based on data sent to DDS).

Solution: Verify license number, name and date of birth. If data is correct transmit again leaving the license number field blank. If no license number was provided leave the license number field blank and provide the same state code in the Driver License state code field as the address state code field.

Example 1: Court submits a Conviction, FTA or Withdrawal electronically and the court enters a Georgia license number that doesn't match the name and d.o.b being transmitted, the court will receive error code 2002. Verify license number being submitted is correct, if the license number is unavailable or unknown transmit leaving the license field blank. If the court transmits an out-of-state license number & address but enters GA as the license state code the court will receive error code 2002. The court needs to verify and transmit with out-of-state license code. Ex: Alabama license state code would be AL.
